HUMAN OCR10 gene is located on chromosome 16p12. It is expressed at high levels in spleen, thymus, peripheral blood leucocytes and lymph nodes and moderately in heart and placenta. It has a role in immune system and cytokine function. It is useful in screening for cognate ligands or drugs that mediate survival and differentiation of cells expressing this receptor. Modified HUMAN OCR10 or its agonist can be used in the treatment of endocrine or

Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified as binding to the proteins are used for the treatment of such disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antibodies; as assay reagents, tissue markers etc. and therapeutically (optionally expressed from the MU-1 gene by gene therapy). Many possible activities/uses of the MU-1 protein are described without supporting evidence, e.g. they regulate cell proliferation and differentiation, induce production of cytokines, stimulate or suppress an immune response (e.g. for treating immune deficiency of any etiology, cancer or autoimmune disease, and for preventing transplant rejection) and regulate of hematopolesis, e.g. for treating anemia. The MU-1 gene is used as a research reagent, for recombinant production of the protein, as tissue or molecular weight marker, for gene mapping; for production of anti-DNA or anti-protein antibodies etc. The MU-1 protein and the nucleic acids are also useful as nutritional supplements or sources and the antibodies can be used therapeutically, as assay reagents and for affinity purification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This represents a MU-1 hematopoietin receptor protein. The protein can be produced by standard recombinant methodology. The MU-1 protein has the biological activity of the MU-1 hematopoietin receptor superfamily chain. It is used to screen for specific binding agents; to raise specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid encoding for treating e.g. cancer,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           for cloning the zalphall gene. The zalphall ligand is useful for treating tumourigenesis. A zalphall ligand-saporin fusion toxin may be used for treating leukaemias and lymphomas. Antagonists against zalphall ligand are useful as research reagents for characterizing ligand-receptor interaction. Antagonists are also useful for inhibiting expansion, proliferation, activation and differentiation of cells involved in regulating hematopoiesis. The zalphall ligand may also be used to stimulate an immune response against B cell tumour, a virus, a parasite or a bacterium. The zalphall polypeptides, polynucleotides, antagonists, agonists and antibodies are also useful for the detection, diagnosis, agonists and antibodies are also useful for the detection, diagnosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a human zalphall ligand polypeptide, which is a cytokine. The zalphall ligand is useful for stimulating t proliferation and development of haematopoietic cells in vitro and i vivo. Zalphall ligand polynuclectides can be used as primers or prob

Modified HUMAN OCRIO-A or its agonist can be used in the treatment of endocrine or immune disorders.
                                     This sequence represents a novel haemopoietin receptor protein family NR8, designated NR8gamma. Antibodies to the NR8 family proteins are ufor the diagnosis of blood formation disorders. Compounds identified binding to the proteins are used for the treatment of such disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             plood

The invention relates to isolated human and murine interleukin-9 (IL-9 /IL-2 receptor-like polypeptides. The plasmid containing the encoding cDNA insert is deposited as ATCC PTA-350. The IL-9/IL-2 receptor-like polypeptides (16445 proteins) can be recombinantly produced using standard recombinant methodology. The 16445 proteins are used for identifying their modulators and for diagnosis and treatment of immune inflammatory and respiratory disorders and disorders associated with lungs, colon, kidney and lymphoid tissues including tonsil and thymus,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Interleukin-9; IL-9;IL-2 receptor; 16445 protein; inflammatory;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   in particular T-lymphocyte-related disorders including atopic conditions such as asthma, allergy, rheumatoid arthritis, psoriasis, chronic inflammatory diseases and graft verses host disease, disorders involving the colon such as diarrhoea, dysentery, infectious enterocolitis, kidney disorders including polycystic kidney disease, cystic renal dysplasia, disorders of the thymus including lymphomas, Hodgkin disease and carcinoids. The 16445 polypeptides are also useful as modulating agents in cellular processes including growth promoting activity, particularly the antigen-independent proliferation of T-helper cell clones. The encoding nucleic acid is useful as primers or hybridization probes for the detection of IL-9/IL-2 receptor-like encoding nucleic acids and for tissue typing and in forensic biology. The present sequence represents the human IL-9/IL-2 receptor-like polypeptide (AAH16445).
  New human cytokine,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a MBP-human zalphall ligand fusion. CC zalphall ligand is a cytokine. The zalphall ligand is useful for CC stimulating the proliferation and development of haematopoiettic cells in vitro and in vivo. Zalphall ligand polynucleotides can be used as CC primers or probes for cloning the zalphall gene. The zalphall ligand saporin fusion is useful for treating tumourigenesis. A zalphall ligand-saporin fusion CC toxin may be used for treating leukaemias and lymphomas. Antagonists CC against zalphall ligand are useful as research reagents for CC characterizing ligand-receptor interaction. Antagonists are also useful CC for inhibiting expansion, proliferation, activation and differentiation CC of cells involved in regulating hematopoiesis. The zalphall ligand may CC also be used to stimulate an immune response against B cell tumour, a CC polynucleotides, antagonists, agonists and antibodies are also useful CC polynucleotides, antagonists, agonists and antibodies are also useful CC for the detection, diagnosis, prevention, and treatment of diseases CC associated with a zalphall ligand genetic defect.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Q
                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Q
                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of a fusion protein, designated huzalphall/MBP-6H, comprising a maltose binding protein (MBP) fused to the cytokine binding domain (amino acids 20-237) of human class I cytokine receptor zalphall (see AAY79312). An cexpression plasmid containing huzalphall (see AAY79312). An expression plasmid containing huzalphall/MBP-6H DNA (see AAZ9454) cease constructed via homologous recombination and the fusion protein was expressed in Escherichia coli BL21 using vector plasmid pTAP98. Zalphall may be involved in an apoptotic cellular pathway, or is a cell-cell signalling molecule, growth factor receptor, or extracellular matrix associated protein with growth factor hormone activity. The invention provides zalphall polypeptides (including fusion proteins), polynucleotides and antibodies, and methods for their use in the treatment and diagnosis of conditions associated with altered zalphall expression or activity.

                                                                                                                                                                                                                                                                                    marrow using expressed sequence tag (EST) analysis. Alternatively it may be obtained from natural sources such as genomic DNA libraries or can be synthesised using commercially available techniques. The growth regulation and functional activities of cells are regulated through the interaction of cytokines and their cognate receptors. Thus the gene sequence and its product are useful for diagnosing or treating a wide range of diseases including cancer, inflammation, autoimmune disease, Crohn's disease, allergy, astema, rheumatoid arthritis, Alzheimer's disease, allergy, disease, multiple sclerosis, habed injury damage, septic shock, stroke, osteoporosis, osteoarthritis, cardiovascular disease, kidney disease, liver disease, ischemic injury, myocardial infarction, hypotension, hypertension, acquired immune deficiency syndrome (AIDS), male pattern baldness, and bacterial,

                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to human HNOVILR polynucleotides and polypeptides. The sequences can be used for diagnosing a disease or a susceptibility to a disease related to expression or activity of the polypeptide by determining the presence or absence of a mutation in the nucleotide sequence and/or analysing for the presence or amount of polypeptide expression in a sample derived from the subject. The HNOVILR polypeptides and polynucleotides are useful for screening to identify compounds that stimulate or inhibit the function of the polypeptide. These compounds the sequences of the invention can be used for treating or diagnosing cancer, inflammation (e.g. rheumatoid arthritis), autoimmunity, allergy, crohn's disease, Alzheimer's disease, Parkinson's disease, multiple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; HNOVILR; cancer; inflammation; rheumatoid arthritis; autoimmunity; allergy; Crohn's disease; Alzheimer's disease; Parkinson's disease; AIDS; multiple sclerosis; stroke; Sepsis; osteoporosis; ischaemia; hypotension; myocardial infarction; hypotrension; acquired immunodeficiency syndrome; fungal disease; bacterial disease; viral disease; cytostatic; nootropic; fungal disease; bacterial disease; viral disease; cytostatic; nootropic;

                                    The present sequence is that of HUMAN OCR10-Fc fusion protein, which is expressed as a soluble secreted protein. It comprises of extracellular domain from HUMAN OCR10 and crystallisable fragment (Fc) region of human immunoglobulin gamma-1 (IG21). HUMAN OCR10-Fc DNA insert can be used to tranform host cells or for studying efficacy of drugs for diseases associated with HUMAN OCR10 or OCR10-A polypeptide-mediated signal transduction. HUMAN Orphan Cytokine Receptor-10 (OCR10) gene is located on chromosome IGp12. It is expressed at high levels in spleen, thymus, peripheral blood leucocytes and lymph nodes and moderately in heart and placenta. It has a role in immune system and cytokine function. It is useful in screening for cognate ligands or drugs that mediate survival and differentiation of cells expressing this receptor. Modified HUMAN OCR10 or its agonist can be used in the treatment of endocrine or immune Aignates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; Orphan Cytokine Receptor-10; OCR10; chromosome 16p12; screen; cytokine; cognate ligand; endocrine disorder; immune HUMAN OCR10-Fc fusion protein; crystallisable fragment; Fc.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cc immunological disorders. DCRS3 (50R), DCRS4 (cytor) or fragments are cc useful in drug screening to identify compounds having binding affinity cc to the receptor subunit. Modulators of DCRS are useful for modulating cc the physiology or development of a cell or tissue culture cells. A cc purified DCRS is useful as a reagent to detect antibodies generated in cr response to the presence of elevated levels of expression, or cr immunological disorders which lead to production of antibody to the cendogenous receptor. Cytokine receptor sequences are useful as probes cc for detecting levels of the cytokine receptor in patients suspected of cc aving an immunological disorder. Antibodies have therapeutic value, are useful as potent antagonist, in detecting or quantifying ligands, for cc useful as potent antagonist, in detecting or quantifying ligands, for cc isolating DCRS proteins and peptides, to screen expression libraries for cc particular expression products, to raise anti-diotypic antibodies and cc for detecting or diagnosing various immunological conditions related to expression of the protein or cells which express the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches 214;

Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified as binding to the proteins are used for the treatment of such disorders.

A zalphall ligand-saporin fusion toxin may be used for treating leukaemias and lymphomas. Antagonists against zalphall ligand are useful as research reagents for characterizing ligand-receptor interaction. Antagonists are also useful for inhibiting expansion, proliferation, activation and differentiation of cells involved in regulating hematopoiesis. The zalphall ligand may also be used to stimulate an immune response against B cell tumour, a virus, a parasite or a bacterium. The zalphall polypeptides, polypucleotides, antagonists, agonists and antibodies are also useful for the detection, diagnosis, prevention, and treatment of diseases associated with a zalphall ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the

The zalphall ligand is useful for treating tumourigenesis. A zalphall ligand-saporin fusion toxin may be used for treating leukaemias and lymphomas. Antagonists against zalphall ligand are useful as research reagents for characterizing ligand-receptor interaction. Antagonists are also useful for inhibiting expansion, proliferation, activation and differentiation of cells involved in regulating hematopoiesis. The zalphall ligand may also be used to stimulate an immune response against B cell tumour, a virus, a parasite or a bacterium. The zalphall polypeptides, polynucleotides, antagonists, agonists and antibodies are also useful for the detection, diagnosis, prevention, and treatment of diseases associated with a zalphall ligand

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a MBP-human zalphall ligand fus
the plasmid pTAP126. Zalphall ligand is a cytokine. The zalphal
is useful for stimulating the proliferation and development of
haematopoietic cells in vitro and in vivo. Zalphall ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New human cytokine, designated zalphall ligand, useful for stimulating the proliferation and/or development of haematopoietic cells in vitro and in vivo, and for treating tumourigenesis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

Zalphall ligand polynucleotides can be used as primers or probes for cloning the zalphall gene. The zalphall ligand is useful for treating tumourigenesis. A zalphall ligand-saporin fusion toxin may be used for treating leukaemias and lymphomas. Antagonists against zalphall ligand are useful as research reagents for characterizing ligand-receptor interaction. Antagonists are also useful for inhibiting expansion, proliferation, activation and differentiation of cells involved in regulating hematopoiesis. The zalphall ligand may also be used to stimulate an immune response against B cell tumour, a virus, a parasite or a bacterium. The zalphall polypeptides, polynucleotides, antagonists, agonists and antibodies are also useful for the detection, diagnosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a mouse zalphall ligand polypeptide, which is a cytokine. The zalphall ligand is useful for stimulating t proliferation and development of haematopoietic cells in vitro and i

The zalphall ligand is useful for treating tumourigenesis. A zalphall ligand-saporin fusion toxin may be used for treating leukaemias and lymphomas. Antagonists against zalphall ligand are useful as research reagents for characterizing ligand-receptor interaction. Antagonists are also useful for inhibiting expansion, proliferation, activation and differentiation of cells involved in regulating hematopoiesis. The zalphall ligand may also be used to stimulate an immune response against B cell tumour, a virus, a parasite or a bacterium. The zalphall polypeptides, polynucleotides, antagonists, aganists and antibodies are also useful for the detection, diagnosis, aganists and antibodies are also useful for the detection, diagnosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a MBP-mouse zalphall ligand fusion in the plasmid pTAP126. Zalphall ligand is a cytokine. The zalphall ligand is useful for stimulating the proliferation and development of haematopoietic cells in vitro and in vivo. Zalphall ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New human cytokine, designated zalphall ligand, useful the proliferation and/or development of haematopoietic and in vivo, and for treating tumourigenesis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  11-MAR-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence was used to raise antibodies, and is derived from the present sequence was used to raise antibodies, and is derived from the human zalphall ligand polypeptide. Zalphall ligand is a cytokine. CC The zalphall ligand is useful for stimulating the proliferation and development of haematopoletic cells in vitro and in vivo. Zalphall CC ligand polynucleotides can be used as primers or probes for cloning the CC zalphall gene. The zalphall ligand is useful for treating tumourigenesis. A zalphall ligand-saporin fusion toxin may be used for treating cC leukaemias and lymphomas. Antagonists against zalphall ligand are cuseful as research reagents for characterizing ligand-receptor cC interaction. Antagonists for characterizing ligand-receptor cC interaction, activation and differentiation of cells involved in cc regulating hematopoiesis. The zalphall ligand may also be used to cor a bacterium. The zalphall polypeptides, polynucleotides, antagonists, agonists and antibodies are also useful for the detection, diagnosis, prevention, and treatment of diseases associated with a zalphall ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New human cytokine, designated zalphall ligand, useful the proliferation and/or development of haematopoietic and in vivo, and for treating tumourigenesis -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       of having or being prone to a disease associated with IL-15 expression, e.g. infections, inflammation or tumours. The inhibitors can also be used for research or diagnostic purposes. Using antisense compounds specifically and effectively inhibits IL-15 function.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence is the human interleukin-15. The invention relates to antisense compounds that are targeted to a 5' or 3' untranslated region (5'UTR or 3'UTR) of a nucleic acid molecule encoding human interleukin-15 (IL-15), and inhibit the expression of human IL-15. The antisense inhibitors are is useful for inhibiting expression of IL-15 in human cells or tissues in vitro, for treating humans or other animals suspected
                                                                      Isolated DNA encoding polypeptide with mammalian II-15 activity - stimulates proliferation and differentiation of T cells, used for treating carcinoma(s), melanomas, etc. and viral infections
                                                                                                                                                                                                                                                                                                                                                                          Homo

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAT00524, AAT00525). Both the simian and the human ORFs encode a precursor polypeptide (AAR83436, AAR8348). The precursor polypeptides each comprise a 48-AA leader sequence and a sequence encoding mature simian or human IL-15 polypeptides. The active simian and human IL-15 polypeptides are disclosed in AAR83309 & AAR83310 respectively. The invention also comprises other mammalian IL-15, including human IL-15, that hybridise to probes defined by AAR83438. A plasmid contg. a recombinant clone of human IL-15 CDNA was deposited with ATCC on Feb. 19 193 under ATCC 69245. The deposit was named 141-hETF. AAR83435 is a mammalian mature IL-15 polypeptide. It is a generic sequence which encompasses both AAR83309 (simian) and AAR83310 (human) IL-15 mature polypeptides.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A simian species of IL-15 (sIL-15) was purified and its AA sequence and cDNA sequence analysed (see AAR83309, AAR83436, AAT00524, AAT00525). Both the simian and the human ORPs encode a precursor polypeptide (AAR83436, AAR83438). The precursor polypeptides each comprise a 48-AA leader sequence and a sequence encoding mature simian or human IL-15 polypeptides. The active simian and human IL-15 polypeptides are disclosed in AAR83309 sequence simian and human IL-15 polypeptides are disclosed in AAR83309 sequence simian and human IL-15, that hybridise to probes defined by AAR83310 respectively. The invention also comprises other mammalian IL-15; including human IL-15, that hybridise to probes defined by AAR8348. A plasmid contg. a recombinant clone of human IL-15 cDNA was deposited with ATCC on Feb. 19 1993 under ATCC 69245. The deposit was named 141-hETF. AAR83435 is a mammalian mature IL-15 polypeptide. It is a generic sequence which encompasses both AAR83309 (simian) and AAR83310 (human) IL-15 mature polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

The N-terminal sequence of the purified SETF was determined and then PCR primers were designed based on the sequence information. A 92 bp fragment was amplified from CVI/EBNA DNA and was used as a probe to screen a CVI/EBNA CDNA library for the full-length SETF coding sequence. Mature SETF induces proliferation and/or differentiation of precursor or mature T cells and is useful for promoting long-term in vitro culture of T-lymphocytes and T-cell lines. It is used for treating gastrointestinal diseases including peptic ulcer, colitis and malignancy and for treating HIV infection.
New isolated simian and human epit which stimulate the proliferation T-lymphocytes and T-cell lines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Generic mammalian

The pref. ETT are the simian (AAW07254) or human (AAW07255) proteins. This sequence represents the generic sequence of the mature protein. Both the human and simian proteins contain a 48 amino acid leader sequence. ETF is a protein of 15-17 kD which is expressed by epithelial cells and stimulates proliferation and/or differentiation of precursor and/or mature T cells. The protein is therefore useful for promoting long term in vivo culture of T-lymphocytes and T-cell lines.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            mature protein which is used in a method for treating or preventing gastrointestinal disease. These polypeptides have particular application in the treatment of gastrointestinal disorders associated with disruption of the gastrointestinal epithelium or villi such as chemotherapy and radiation-therapy induced enteritis (gut toxicity), mucositis, peptic ulcer disease, gastroenteritis and colitis, villus atrophic disorders, malignancy and inflammatory bowel disease. ETF polypeptides may also be useful in the treatment of human immunodeficiency virus (HIV) and HIV-associated disease due to their ability to stimulate CD4+ and CD8+cells. Biologically active ETF may be used to treat a variety of other diseases or conditions where T-cell or B cell stimulation is desired.
The invention relates to an isolated antibody that binds specifically to a similar or human epithelium-derived T-cell factor (ETF) polypeptide. The antibodies are used, optionally when immobilized or labeled, to detect and quantify ETF in standard immunoassays. They may also be used as diagnostic and therapeutic agents, e.g. when conjugated to toxins (or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       T cell proliferation; gastrointestinal disease; mucositis; colitis; gastroenteritis; villus atrophy; malignancy; inflammatory bowel disease; human immune deficiency virus; tumour; simian.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       their precursors) or radionuclides. ETF induces proliferation and/or differentiation of T cells (or their precursors), e.g. for use in establishing long term in vitro cultures; and is also used to treat gastrointestinal disease (e.g. enteritis or mucositis induced by chemotherapy or radiation, peptide ulcer, gastroenteritis, colitis, villus atrophy, malignancy and inflammatory bowel disease), to treat human immune deficiency virus infection or associated disease, or generally in any situation requiring stimulation of T or B cell proliferation, secretion of immunoglobulins or certain cytokines, increased anti-infectious disease immunity, induction of T-cell lytic activity or increased destruction of tumour or virus-infected cells. The present sequence represents the mature active sequence of simian ETF
                                                                                                                                                                                                                                                                                                                                                                 chemotherapy; radiotherapy; gut toxicity; cancer; side effect; tolerated dose.

```

CC This sequence represents mature simian epithelium-derived T-cell factor CC (ETF). This is a previously unidentified T-cell growth factor which CC stimulates precursor or mature CD4+ and CD8+ T-lymphocytes to proliferate CC and differentiate. It also promotes proliferation of the gastrointestinal CC epithelium. The protein can be used to promote long-term in vitro culture of T-lymphocytes and T-cell lines. ETF can be used for treating HIV CC infection, HIV-associated diseases, and other diseases or conditions CC where stimulation of T-cell proliferation would be desirable e.g., it CC ould be used to augment the destruction of tumour cells or virally-CC infected cells. ETF may also be used to treat or prevent gastrointestinal CC disease, including chemotherapy and radiotherapy associated enteritis, CC gastroenteritis, colitis, inflammatory bowel disease and villus atrophic CC disorders. Chemotherapy and radiotherapy associated enteritis (gut CC toxicity) results in bleeding and sepsis due to gastrointestinal flora centering the blood, and thus can limit the dosage of therapeutic agent administered to a cancer patient. ETF may therefore be used to increase CC the tolerated doses radiotherapy and chemotherapy.
